

WHAT AUSTRALIAN JOURNALISTS WILL NOT TELL YOU

"In 2024, nuclear reactors globally produced a record 2,667 TWh of electricity. Asia is driving growth with 59 out of 70 new reactors under construction as nuclear energy remains vital for climate goals." *(World Nuclear News*)*

Note that Australia's entire annual electricity consumption is around 250 terawatt-hours (TWh) per year.

That's less than a tenth of the total electricity being generated by nuclear in the world.
